

Real-background COMET and CosMx experiments remain proxy evidence

Synthetic fold/crack perturbations were inserted into held-out real fields; natural artifacts were not labeled

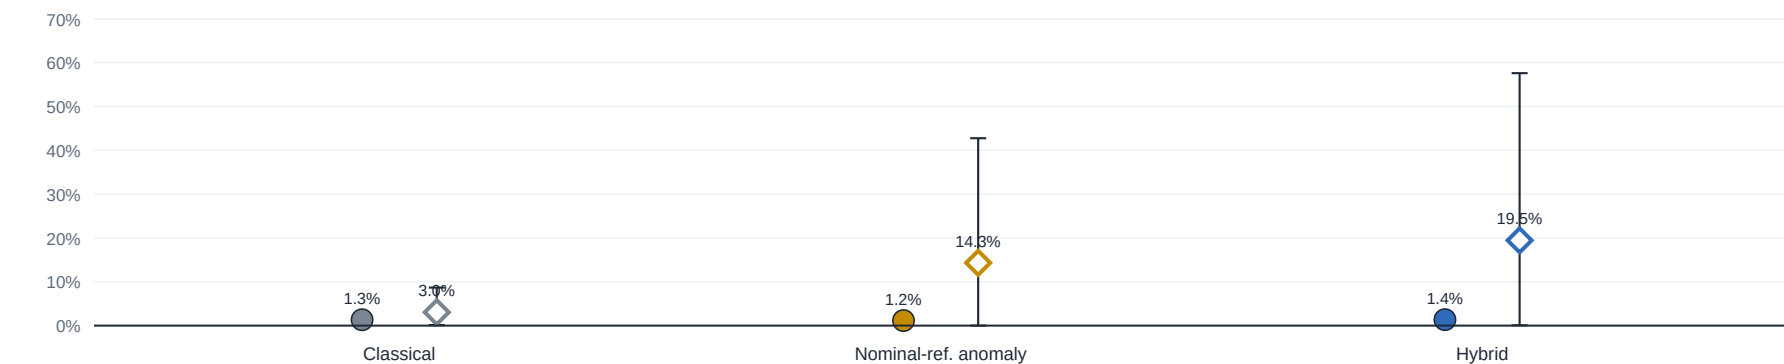

A COMET: controlled perturbation Dice

B CosMx: controlled perturbation Dice

C Untouched real-field alert burden (not a false-positive rate)

Whiskers: descriptive 95% group-bootstrap intervals. COMET n=5 provisional field groups; CosMx n=4 provisional slide/run groups; higher-level independence unverified.
